

B & H LABELER REBUILD & RECONDITIONING

HAVE A B & H LABELER you want to keep in service but it needs more than a few minor repairs? Have a B & H labeler in storage that you want to put back into service? Find a used B & H labeler that you would like to buy and then get it back into tip-top condition? If this sounds like your situation, B & H offers three options for restoring your B & H labeler to production ready condition. All three options are designed to address any mechanical or electrical issues with your B & H labeler that negatively impact speed, labeling quality, uptime, ease of change-over and ease of set-up.

THREE OPTIONS

B & H offers three options for B & H labelers that need to return to new or nearly new performance standards:

- Rebuild, at B & H
- Recondition, at B & H
- Heavy Maintenance, In The Field

SCOPE OF SERVICES

Labeler rebuild and reconditioning services are available for the following B & H Labeler models:

- Marathon Series
- BH8000 Series
- BH1600
- BH2000
- BH2300

Heavy Maintenance services are available for every B & H labeler regardless of model, age or location.

REBUILD, AT B & H

A rebuilt B & H labeler is a complete and operational labeler that has been evaluated, completely disassembled and rebuilt from the frame up by B & H technicians in Ceres, CA. The frame will be cleaned and powder coated, missing components, if any, will be replaced and worn or damaged components will be rebuilt, replaced or upgraded. All other operational machine components are repaired if necessary, tested and cleaned, and then reinstalled on the machine. Where applicable, rebuilt labelers will include new, upgraded components. A rebuilt labeler will have a "nearly new" appearance.

Rebuilt labelers are offered with a twelve month warranty on upgraded, new or rebuilt components, and a three month warranty on all other components.

RECONDITION, AT B & H

A reconditioned B & H labeler is a complete and operational labeler that has been evaluated, cleaned and repaired by B & H technicians in Ceres, CA. Missing components, if any, will be replaced, and worn or damaged components will be repaired, rebuilt, replaced or upgraded. All other operational machine components are tested and cleaned, and then reinstalled on the machine.

Reconditioned labelers will be clean, but they will have the same appearance as when they arrived at B & H with the exception of new components. They will not have a "nearly new" appearance.

Reconditioned labelers are offered with a twelve month warranty on upgraded, new or rebuilt components, and a three month warranty on all other components.

REBUILD, IN THE FIELD

A Rebuild project starts with a Labeler Assessment completed by a B & H Field Service Engineer. The completed Labeler Assessment is then used to create a list of required parts and components, a quote for those components, and a quote for installing those components in the field.

Cutter rebuilds cannot be completed in the field so they cannot be included in a Heavy Maintenance project. All new parts and upgrades come with B & H's standard twelve-month warranty.

CONTACT US

For more information on B & H Labeler Rebuilds or to request a quotation, call B & H at 209-537-5785 or e-mail us at parts@bhlabeling.com.

LABELER REBUILD & RECONDITIONING HIGHLIGHTS
